

Residential Solar Power Flat Roof – Ballasted and Penetrating

Las Vegas NV

The primary options for mounting solar modules on a flat roof are attached or ballasted racking systems. This is determined by the type of roof and your manufacturer's warranty requirements. One advantage of having solar is the added protection and shading the solar panels provide your roof. Bombard Renewable Energy has installed many flat-roof systems and can work with you to determine the best option.

Bombard Renewable Energy has the strength and resources to handle any size project. From the initial planning stages, proposals, costs analysis, installation to completion, customer service and communication are instrumental in managing our customers' expectations.

Residential services include

Solar Photovoltaic on flat or pitched roofs & ground and pole mounted systems

Grid-tied Installation, Off Grid Installation, Wind, Remote Locations, Electric Vehicle Charging Station
